

Order History Import Guide

Audience: Admin API users importing historical order data from external systems

Overview

The Order History Import feature allows bulk import of historical order data via XLSX files. This is designed for migrating data from legacy systems or synchronizing with external order management systems.

Import Endpoint

```
POST /admin/history/batch_update/order-history/import_xlsx
Content-Type: multipart/form-data
Authorization: Bearer {admin_token}
```

- Request:**
- File parameter: `file` (XLSX file)
 - Max file size: 200 MB
 - Timeout: 30 minutes

XLSX File Format

Required Columns

The Excel file must contain the following columns in the **first row (header)**:

Column Name	Type	Required	Description	Valid Values
ORDER ERP ID	string	Yes	Unique order identifier from external system	Any string
CUSTOMER LOCATION – ERP ID	string	Yes	Customer location code from external system	Must match existing location
FECHA ORDEN	date	Yes	Order date	Date format (Excel date or yyyy-MM-dd)
EAN	string	Yes	Product EAN code	Must be 13 digits
ESTADO	string	Yes	Order state	See "Valid States" below
ORIGEN	string	Yes	Order origin system identifier	Any string (e.g., "LEGACY_SYSTEM", "SAP")

Optional Columns

Column Name	Type	Required	Description	Example
DROGUERIA	string	No	Marketplace distributor name	"DROGUERIA EJEMPLO SA"
CODIGO CLIENTE	string	No	Customer's logistic code	"CLI001"
OBSERVACIONES	string	No	Order observations/notes	"Delivery by 5pm"
CANTIDAD	integer	No	Quantity ordered	100
ATENDIDAS	integer	No	Quantity delivered	95
RECHAZADAS	integer	No	Quantity rejected	5
P. COSTO BRUTO	decimal	No	Gross unit price	150.50
P. DESCUENTO %	decimal	No	Discount percentage	10.5
P. COSTO NETO	decimal	No	Net unit price after discount	135.00
COMBOS	string	No	Combo/bundle name if applicable	"Promo 3x2"
CODIGO CUPON	string	No	Coupon code applied	"SUMMER2025"
P. DESCUENTO CUPON %	decimal	No	Coupon discount percentage	5.0
RETORNO	string	No	Rejection reason if applicable	"Product expired"

Valid States

The **ESTADO** column accepts the following values (case-insensitive):

- BORRADOR - Draft order
- FINALIZADO - Completed order
- CANCELADO - Cancelled order
- A_REVISAR - Under review
- ENVIADO - Sent to distributor
- ERROR_AL_ENVIAR - Error sending to distributor
- NUEVO - New order

Import Behavior

Order Updates

- If an order with the same `ORDER_ERP_ID` already exists in the system, it will be **updated**
- If it's a new `ORDER_ERP_ID`, a new order will be **created**

Data Processing

- Uses PostgreSQL COPY for high-performance bulk inserts
- Maximum processing time: 30 minutes
- Processes thousands of records per second
- Transaction-based: all changes are rolled back if critical errors occur

Validation

- Customer locations must exist before import (identified by `CUSTOMER_LOCATION_ERP_ID`)
- Products with specified EAN codes must exist in the catalog
- Invalid rows are skipped and reported in the response

Response Format

Success Response

```
{
  "success": true,
  "message": "Procesamiento completado exitosamente - 500 órdenes creadas, 100 órdenes actualizadas",
  "statistics": {
    "totalRowsProcessed": 600,
    "successfulRows": 600,
    "failedRows": 0,
    "processingTimeMs": 12500
  },
  "entitiesProcessed": [
    {
      "entityName": "Órdenes Creadas",
      "count": 500
    },
    {
      "entityName": "Órdenes Actualizadas",
      "count": 100
    },
    {
      "entityName": "Items de Órdenes",
      "count": 1500
    },
    {
      "entityName": "Códigos Logísticos",
      "count": 600
    }
  ]
}
```

Partial Success (with errors)

```
{
  "success": false,
  "message": "Procesamiento completado con errores",
  "statistics": {
    "totalRowsProcessed": 600,
    "successfulRows": 550,
    "failedRows": 50,
    "processingTimeMs": 13200
  },
  "validationErrors": [
    {
      "row": 15,
      "errors": ["ESTADO 'INVALIDO' no es válido. Valores permitidos: BORRADOR, FINALIZADO, CANCELADO, A_REVISAR, ENVIADO, ERROR_AL_ENVIAR, NUEVO"]
    },
    {
      "row": 23,
      "errors": ["CUSTOMER LOCATION - ERP ID es requerido"]
    },
    {
      "row": 47,
      "errors": ["EAN es requerido", "FECHA ORDEN debe ser una fecha válida"]
    }
  ],
  "processingErrors": [
    "Customer location 'INVALID_CODE' not found for order ERP_12345",
    "Product with EAN '1234567890123' not found in catalog"
  ]
}
```

Excel Template Example

Here's how your Excel should look:

ORDER ERP ID	CUSTOMER LOCATION – ERP ID	FECHA ORDEN	DROGUERIA	ESTADO	CODIGO CLIENTE	OBSERVACIONES	EAN	CANTIDAD	ATENDIDAS	RECHAZADAS	P. COSTO BRUTO	P. DESCUENTO %	P. COSTO NETO	COMBOS	CODIGO CUPON
ORD-001	CLI-123	2025-01-15	DROGUERIA SA	FINALIZADO	LOG001	Urgent delivery	7891234567890	100	100	0	150.00	10	135.00		PROMO1
ORD-002	CLI-456	2025-01-16	DROGUERIA SA	CANCELADO	LOG002	Client cancelled	7891234567891	50	0	50	200.00	0	200.00		

Best Practices

Before Import

- 1. **Validate your data** - Ensure all required columns are present
- 2. **Check references** - Verify that customer location codes exist in the system
- 3. **Test with small file** - Start with 100-500 rows to validate format
- 4. **Backup your data** - Keep a copy of the original Excel file

During Import

- 1. **Monitor progress** - Large files may take several minutes
- 2. **Check response** - Review validation errors and processing errors
- 3. **Don't interrupt** - Let the import complete (timeout is 30 minutes)

After Import

- 1. **Review statistics** - Check created vs updated counts
- 2. **Investigate errors** - Fix invalid rows and re-import if needed
- 3. **Verify orders** - Spot-check orders in the admin interface

Common Errors and Solutions

Error	Cause	Solution
"CUSTOMER LOCATION – ERP ID es requerido"	Missing customer location code	Add customer location code to the row

Error	Cause	Solution
"Customer location 'XXX' not found"	Location doesn't exist in system	Import customer locations first or verify the code
"ESTADO 'XXX' no es válido"	Invalid state value	Use one of the valid states listed above
"EAN es requerido"	Missing product EAN	Add EAN code to the row
"Product with EAN 'XXX' not found"	Product doesn't exist in catalog	Import products first or verify the EAN
"FECHA ORDEN debe ser una fecha válida"	Invalid date format	Use Excel date format or yyyy-MM-dd
"ORDER ERP ID es requerido"	Missing order identifier	Add unique order ID to the row

Performance Notes

- **Bulk processing:** Uses PostgreSQL COPY for optimal performance
- **Expected speed:** ~2,000-5,000 rows per second depending on hardware
- **Memory usage:** Streaming processing, minimal memory footprint
- **Concurrent imports:** Only one import per marketplace at a time recommended

Migration Workflow Example

Step 1: Prepare Customer Locations

```
# Import customer locations first
POST /admin/history/batch_update/clients/import_xlsx
```

Step 2: Prepare Products Catalog

Ensure all products with EAN codes are in the system before importing orders.

Step 3: Import Historical Orders

```
# Import orders in batches if file is very large
# Recommended: Split files every 50,000 rows
POST /admin/history/batch_update/order-history/import_xlsx
```

Step 4: Verify Import

Check the response statistics and investigate any errors.

Changelog

v1.0.0 (2025-12-17)

- Initial documentation release
- Support for order creation and updates via XLSX
- PostgreSQL COPY bulk processing
- Transaction-based error handling
- Comprehensive validation error reporting
